

Date	15 July 2026
Project Name	Smart Lender AI: An Intelligent Machine Learning System for Loan Approval Prediction
Student Name	Jinkala Sunitha
Maximum Marks	3 Marks

BRAINSTORMING & IDEA PRIORITIZATION TEMPLATE

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.N	Team Member	Idea / Suggestion	Category	Group No.
1	Jinkala Sunitha	Predict loan approval status from historical applicant features using optimized tree classifiers like Random Forest and XGBoost.	Core ML Model	1
2	Jinkala Sunitha	Build a Flask web application featuring a secure data submission form and instant automated eligibility outcomes.	Web App / Backend	2
3	Jinkala Sunitha	Design an intuitive front-end user interface complete with interactive approval gauges, modern styling, and responsive layout grids.	UI/UX	3
4	Jinkala Sunitha	Incorporate client-side and server-side data sanitization and boundary-value verification to safeguard model inputs.	Reliability / Security	2
5	Jinkala Sunitha	Implement automated test scripts to thoroughly audit API request routing, model prediction latency, and input validation paths.	Quality Assurance	4
6	Jinkala Sunitha	Establish direct integration links with Credit Bureau APIs to dynamically fetch applicant profiles alongside automated client notifications.	Future Roadmap	5

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility	Importance	Priority	Selected
1	ML classification pipeline leveraging optimized machine learning models trained on 11 critical demographic and credit features.	High	High	1	Yes
2	Flask application server housing a prediction route endpoint alongside input cleansing and exception handlings.	High	High	2	Yes
3	Visual interactive dashboard with intuitive form elements, helpful tooltips, and responsive design metrics.	High	Medium	3	Yes
4	Pre-deployment validation scripts testing model accuracy under edge cases and missing value distributions.	High	Medium	4	Yes
5	SMS alert relays and automated dynamic credit-score lookup integrations.	Medium	High	5	No (Phase 2)
